

CONFORMITY INFORMATION

FOLDING WORK PLATFORM

SWL: 150kg EN131 Standard

The Folding Work Platform supplied by Safety Platforms Ltd is designed to provide a safe low level access platform for internal works. The unique design addresses concerns raised by interested parties concerning stability and the locking mechanism of the legs.

Stability: The wide outrigger feet at the base of the legs ensure the platform is stable when in use.

Locking Legs: The double locking mechanism on the hinges means the legs can not be unlocked by mistake or when moving from work position to work position.

1) EN131 is a European standard for aluminium and timber steps and ladders.

Folding work platform complies with the appropriate elements of this standard as follows:

Safe Working Load 150kg: Safe Working Load of 150kg therefore compliant

Max distance between rungs 300mm: distance is 300mm therefore compliant

Anti-Slip tread: surface is textured, therefore compliant

Anti-Slip feet: rubber, therefore compliant

2) The risks associated by the use of a Folding Work Platform are addressed by the above design characteristics and by complying with the following guidelines

Regularly inspect the platform for signs of damage or excessive wear

Never use a damaged platform

Keep the platform clean and free of excessive debris

Ensure all four feet are securely founded, be cautious of slippery surfaces

To avoid overturning do not stand on the edge or corners of the platform

Do not over-reach whilst working

Follow all details on user information label fixed to side of legs.
