EASY LOAD

Call 01924 420820

EASYLOAD

Easy-Load makes loading out **SAFER, FASTER, EASIER** and **SAVES MONEY!**

Safety Platforms are delighted to launch their new "Easy-Load" bracket which removes the need for carrying heavy plasterboard sheets up stairwells by allowing sheets to be passed up through a letterbox in the floor. Up to five 33kg sheets can be loaded onto the bracket, the operatives then walk to the upper floor, remove the sheets and stack them ready for use.

SAFER

Many professionals within the industry including The Health & Safety Executive are very concerned about the risks of musculoskeletal injury when carrying sheets of plasterboard up stairwells. A risk of falls from height is also created when removing stairwell edge protection to allow large sheets to pass to the upper floor. Easy-Load substantially removes both of these risks.

FASTER

Easy-Load allows just two operatives to lift the heavy sheets, without the bracket and considering manual handling regulations a further two operatives would be

required to receive the boards on the upper floor. Even with lighter standard sheets considerable labour savings can be achieved. Operative feedbacks from site trials has stated that in the region of half a day can be saved when loading out a typical house first floor with in excess of 200 boards.

EASIER

Operatives who are using Easy-Load on a regular basis say it is far easier and less physically demanding than walking up and down stairs over 200 times whilst carrying heavy sheets!

SAVES MONEY!

The substantial labour savings achieved will quickly repay the small outlay and will save time and money on every job thereafter.

Easy-Load can be hooked on to any standard ladder or the ladder frame from the Safety Platforms Stairsafe system. Easy-Load has a safe working load of 150kg, care should however be taken to ensure the ladder it is used with has a suitable load capacity for the loads being placed in the bracket.

Safety Platforms Limited was established to provide quality safety solutions to the construction and related industries. Safety Platforms place user safety and ease of use at the forefront of their product development philosophy.
